

How to start the user interface

1. System Requirements

- Windows 10 or Windows 11
- Internet connection
- At least 4 GB RAM Minimum 2 GB free storage
- Administrator access for software installation

2. Install Node.js

- Download and install:
- [Node.js Official Website](https://nodejs.org/en/download)
(Direct link- <https://nodejs.org/en/download>)
- Click get Node.js then select windows/mac then download window installer
- Open the window installer follow all steps.
- During installation:

Keep all default settings

Make sure “**Add to PATH**” is checked

- After installation, open “CMD as an administrator” and check if it is installed by running the following command one by one:

`node -v`

`npm -v`

- If both show versions, Node.js is installed correctly.

3. Download All The files from GitHub(manually)

- GitHub Repository Link- <https://github.com/chandan191224-bit/v2v-major-project-files.git>
- Press the Green “code1” Button and download the Zip File.
- Extract The zip file at any location. (Example-Desktop)
- You will see a folder name “v2v-major-project-files”
- Now all files are downloaded successfully.

4. you can also download All files from GitHub using CMD (easy method).

- Make a folder where u want to download all files.
- Open the folder.
- Copy the path of the folder (right click and select “copy as path”).
- Open CMD as administrator and “write following command then press enter”
`git clone GITHUB\_REPOSITORY\_LINK`
- now all the files will be downloaded same as u do in step 2(manually)

5. Install Project Dependencies

- open the CMD as administrator(must)
- write the following command and enter
`cd v2v-major-project-files_Folder_path`
- then again write following command and enter.
`npm install`
- now all the Dependencies will be downloaded in the folder “node modules”

Now start the Frontend and backend

6. start the frontend:

- Open the cmd as an administrator
- Then run the following command
`cd v2v-major-project-files_Folder_path`
- then after that run another command
`npm run dev`
- Now you will see an http link activated if not the run the commands again by pressing “ctrl+c then y”
- Now the frontend is activated.
- Open the link in browser
Link- <http://localhost:5173/>

7. start the Backend:

- Open the cmd as an administrator
- Then run the following command
`cd v2v-major-project-files_Folder_path /backend`
- then after that run another command
`node server.js`
- Now you will see
UDP Server running on port 4000
Backend running on port 5000
- Now the backend is activated.

8. Open the MATLAB SIMULINK file you get this file in the same folder where GitHub files are downloaded.
9. now change the setting to MATLAB mode to see the data as per the MATLAB Simulink in the user interface in the browser.
